

# uniCOS Multimedia, 10"

**televic**  
conference

# From the big picture to the smallest detail.

uniCOS 10" broadens the meeting horizon.

## A New Perspective

The uniCOS 10" unit builds on the foundations of the 7" version but translates the multimedia concept to a new scale to create an even **more expansive meeting experience**.

The 10" version more than **doubles the active display area** to give participants more room. With an increased resolution (up to 1280x800), the display allows for more on-screen information. Be it an agenda, documents, or multiple video streams. Combined with the Plixus **Video-IN or Video-OUT Box**, up to 6 video channels are available. Increased screen real estate ensures more complete and more detailed data, right at your fingertips.

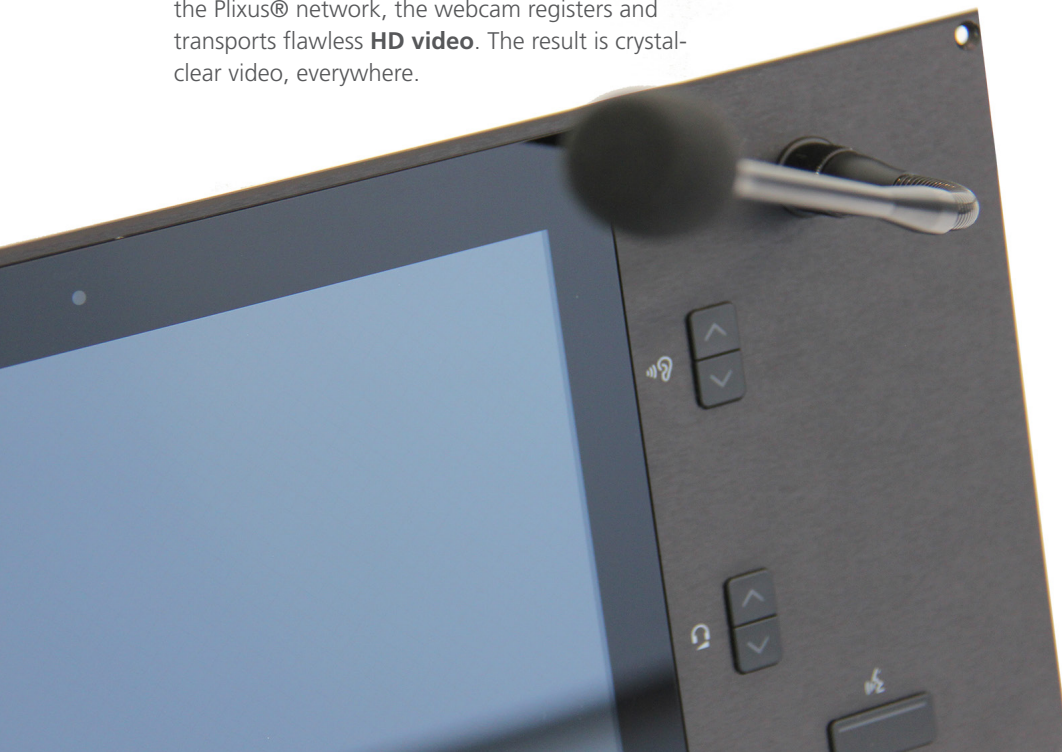

## Integrated Webcam

With a **built-in 3 MP camera**, the uniCOS 10" makes it easy to create a video stream that follows the microphone activity. When participants request to speak, both audio and video become available instantly. Since uniCOS was conceived for the Plixus® network, the webcam registers and transports flawless **HD video**. The result is crystal-clear video, everywhere.

The uniCOS 10" is not just bigger, but it creates an improved meeting experience.

## Refined User Experience

To create a better user experience, the 10" version has **dedicated, physical buttons** on both sides of the display. This hybrid approach of touch screen and hardware buttons ensures that all functionality is comfortably within reach. The dedicated voting, channel selection, and volume buttons facilitate critical functionality while the large touch screen keeps rich multimedia details front & center. This careful reimagining of the uniCOS 10" presents **improved comfort and usability**. Combined with a completely flush design, the 10" version is a natural fit for **high-end boardrooms, city councils, parliaments, and international institutions**.
